Agility and a networked approach

Axonbiotech – innovation, expertise and performance

Axonbiotech is a development, manufacturing and service organization mainly active in the fields of diagnostics, pharmaceuticals and medical technology. Our specialists in microbiology, pharmaceuticals, chemicals and engineering ensure that our products and services are cost-effective and of high quality.

Our expertise, flexibility and ability to innovate guarantee that we provide the best possible services. These include developing and manufacturing diagnostic equipment, assembling medical products and modules, engineering, and implementing automation solutions.

Based in Hengersberg in Germany, the company was founded under the original name of Bovimed in 1999 under the name Bovimed and grew to become a close partner of the Axonlab Group. In 2011 it was acquired by Axonlab and renamed Axon Biotech GmbH. The company has a network of specialist sites in Eastern Europe.

We impress our customers on a daily basis with our agility, our networked approach and our renowned quality standards. We provide expert and impartial advice, take a long-term view, focus on solutions and are always highly motivated. You will notice the difference.

Our services meet a wide variety of the needs of the healthcare industry. In addition to developing and manufacturing diagnostic equipment and assembling medical products, we also specialize in small-scale production and primary packaging. We develop and implement individual assembly solutions, customized machines, special test facilities and automation systems for production and processing companies. In addition, we provide customer support for planning, logistics and shipping processes. Our company is ISO 13485 certified.

Excellence

■ ■ ■ Developing and manufacturing high-quality diagnostic equipment

In our state-of-the-art labs and clean rooms we develop and produce top-quality diagnostic equipment for the medical and pharmaceutical industries. During the evaluation process we carry out applied research and comparative studies. We identify the demands and requirements of future products and set new standards by developing new products and enhancing existing products.

- for specific customers and develop them further.
We establish and further develop customized versions of products from our portfolio.
- We also provide customized packaging solutions.

Our reference products include our in vitro diagnostic devices and reagents, which we have been testing and developing in our class II microbiological lab since 2010. We have controlled areas and clean rooms up to class 10,000. The use of laminar flow units allows us to provide guaranteed aseptic production processes which comply with European directives. Of course, we also supply appropriate analytical services, a pharmacokinetic evaluation and a broad range of physical measurements.

Ideal solutions for small-scale production

Our infrastructure is ideally suited to the production of small batches. We provide cost-effective small-scale manufacturing solutions to companies which do not require large-scale production.

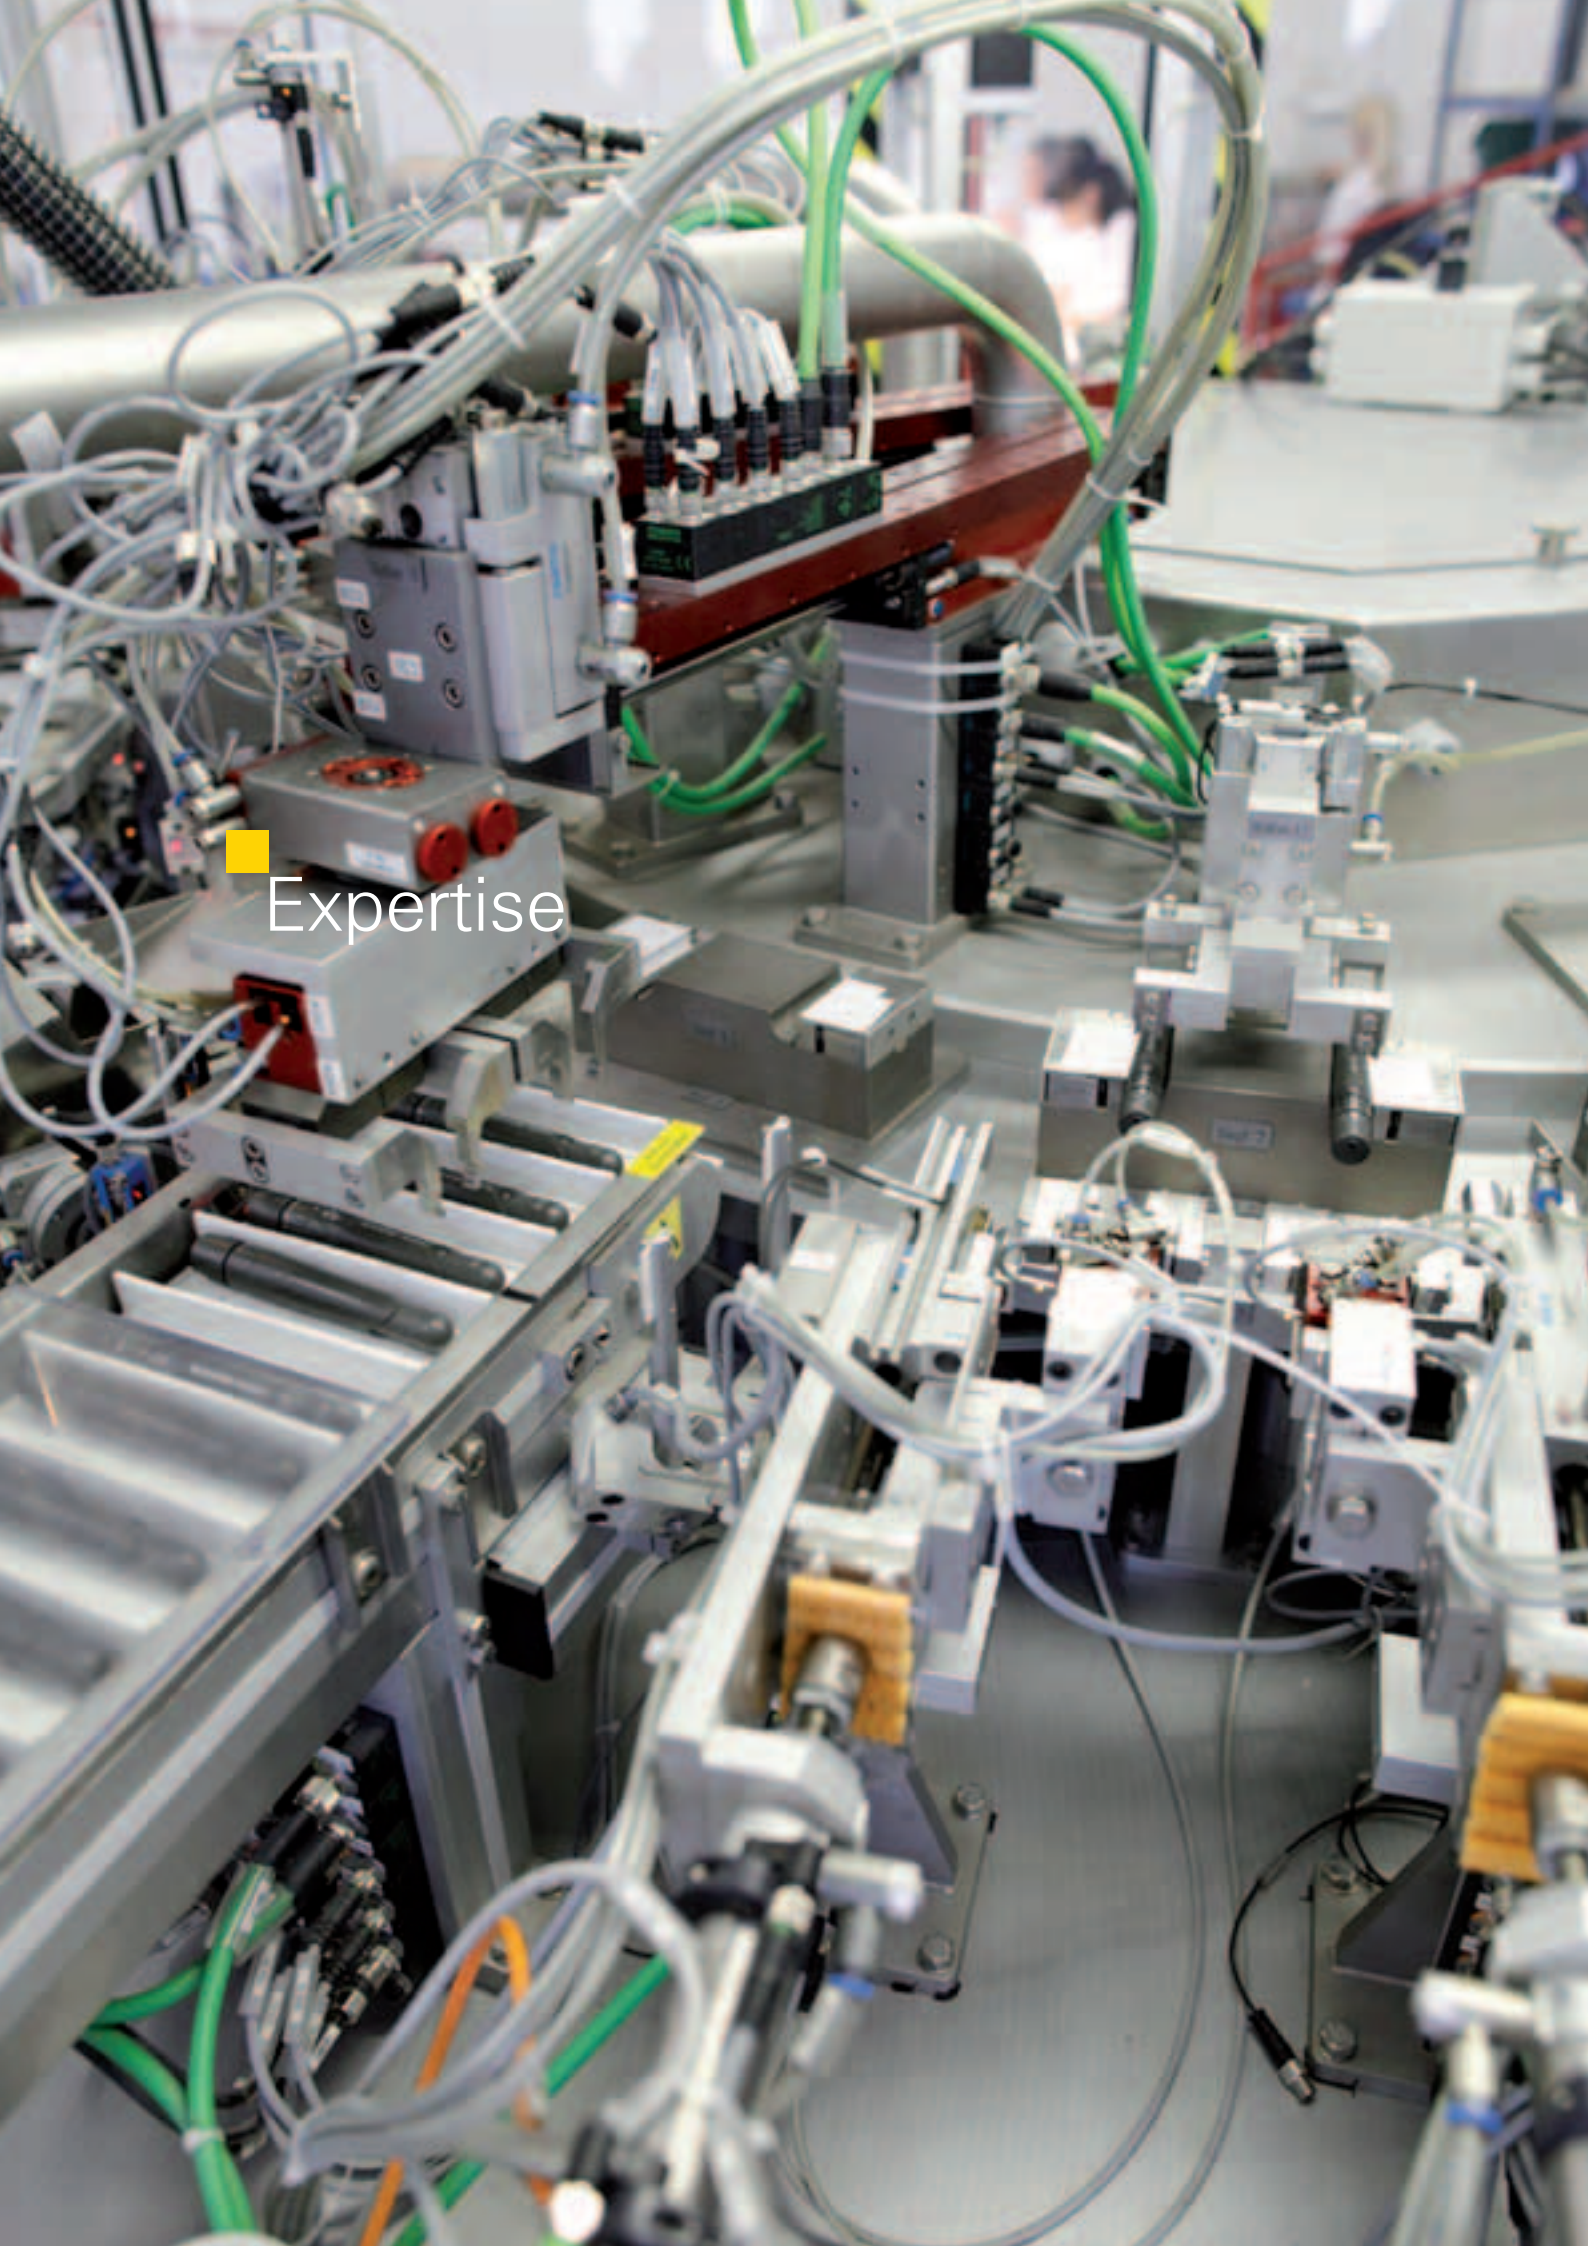

Efficiency

■ ■ ■ Ideal assembly solutions for medical products

We provide our customers with cost-effective assembly, testing and packaging services for individual parts, larger components, modules and complete devices. This includes developing and implementing customized assembly solutions which range from the production of small-scale batches to three-shift manufacturing.

- Our assembly services are highly flexible. They involve a variety of production processes, such as welding, bonding, bolting, hot caulking and riveting. We also integrate various in-process tests into the assembly process to ensure optimum product quality.
- We incorporate finishing procedures, such as pad printing, into our assembly processes. In order to accommodate products of different shapes, we provide in-house printing services. A variety of flat and round printing systems and our own machine for manufacturing printing pads allow us to be highly flexible.

Our assembly solutions are characterized by high levels of efficiency and cost-effectiveness, combined with consistent and uncompromising quality.

Expertise

Automation solutions for efficient production lines

Our automation solutions enable our customers to save money and, at the same time, to increase the efficiency and reliability of their production processes, while maintaining high levels of manufacturing quality.

- We design and build machines for the medical, electronics and automotive industries. We are also happy to provide our services to other sectors.
- In order to meet the requirements of our customers from the medical and pharmaceutical industries, we support the qualification of automation and test systems. We can develop complete customized machine qualification processes (GMP, GAMP) in collaboration with our customers.

We work closely with our customers during the design process and provide them with expert and transparent advice, in order to produce fully functioning systems that meet their specific requirements. Our expertise and many years' experience in building machines guarantee optimal results.

Extensive experience of a variety of industries and product areas

In the medical field, we supply manufacturers of plastic and metal components, in particular needle and cannula producers. Our partially or fully automated testing and assembly processes are also used by a number of manufacturers of medical products. For the automotive industry, we specialize in constructing testing systems for headlamps. In this area, the functional tests include physical testing methods and the use of high-quality camera systems. Our machines and equipment are used for a broad range of applications from small test labs through to heavy industry.
